

Global PAYplus™

Consolidate your global payments operations.

Global PAYplus is a highly scalable global payments system that can be customized to your bank's needs. Its uControl Rules Technology™ improves STP with advanced error detection and repair functionality; and enables banks to generate incremental fee income through more tailored services and greater pricing flexibility. uControl ensures more efficient control and management of multi-currency, multi-bank payments across bank accounts, clearing systems, and central bank channels.

Consolidate Payment Operations for Greater Efficiency

Global PAYplus allows you to consolidate multiple processing centers delivering significant operating efficiencies, reducing complexity and costs. Enjoy greater control over your operation and benefit from standardized operational procedures. You'll be able to offer consistent payment services throughout the world to your full range of customers.

Centralized Control Improves Liquidity and Risk Management

You'll benefit from distributed access to, and centralized control of your global payments operations, realizing improved productivity and increased customer satisfaction. GPP's real-time processing of payments coupled with a comprehensive array of control, monitoring, and reporting features enable better liquidity and risk management.

Global PAYplus maximizes STP – delivering a new level of seamless payment processing and control.

Tailor Operations and Services with Rules Technology

Global PAYplus' uControl rules technology optimizes STP rates with advanced error detection and repair functionality. You have the control to configure payment processing rules so that payments are handled automatically, giving you an even higher rate of STP.

With uControl nontechnical staff are able to customize features and functions including:

- Customized versions for affiliated and correspondent banks
- Generate service fee revenue through new services and reporting
- Establish rules based on individual customer demands
- The ability to establish customer-specific fee schedules
- The ability to tailor workflow to changing needs

Global PAYplus is a multi-bank and multi-currency system, designed to provide unlimited expansion capabilities.

Global PAYplus™

Consolidate your global payments operations.

Global PAYplus Library of Rules includes:

- Debit and credit processing rules
- Payment/cover rules
- Rate usage rules
- Method of Payment (MOP)
- Cut-off usage rules
- Fee rules
- Intervention rules
- Validation rules
- Alert rules
- Customized filters for defining and created user-defined queues

Customize Pricing for Multiple Client Segments

- Rules also make it possible to configure customer-specific fee schedules. Price your services based on what's right for your business and your customers' business — not the limitations of your system.
- Quickly tailor payments-related services to the unique needs of clients, providing customized services to expand fee revenues.

Time-Saving Options

Modules for Global PAYplus offer additional time savings, efficiency improvements and risk reductions by enabling:

- Automated account reconciliation
- Remote initiation of funds transfer requests
- Payment record warehousing
- Automated e-mail notification of completed funds transfers to clients
- Automated receipt and authentication of faxed funds transfer instructions into outgoing payment messages through a direct feed into Fundtech's payment system or another funds transfer system
- Automation of the Fedwire securities transfers that you and your corporate clients send and receive
- Increased security between your wire room and branches for remote wire transfers

An Eye Towards the Future...Unlimited Expansion Capabilities

At the heart of Global PAYplus is its N-tier open systems architecture and multi-platform technology providing global banks a high performance, scalable and reliable infrastructure. Global PAYplus is designed using open systems architecture for scalability, reliability, seamless integration, and flexibility for future enhancements.
