Manage all of your Post Trade Processing from a Single, highly Effective & Secure, Web Interface

TRADEplus™ offers Asset Managers a competitive edge with a technology that supports high volume processing through superior internet capabilities, automated trade operations and advanced STP.

Providing real-time connectivity with Omgeo, DTCC, SWIFT and other leading market applications and standards, TRADEplus™ automates internal and external matching, manages exceptions, enriches trade records, automates the settlement process, and intelligently routes information by business area.

Deploying TRADEplus removes time consuming manual processes from trade operations, and significantly increases real-time visibility and control, while driving down costs and execution risk.
