

## Global PAYplus™ - OmniPAY

**Introducing OmniPAY - the web-based intelligent payments hub that processes mixed payments files using your existing payments infrastructure. By eliminating the “siloes” approach of legacy systems, OmniPAY allows you to offer clients highly automated and highly customized payments services that integrate with their enterprise resource planning (ERP) systems. You’ll deliver a new level of customer satisfaction and generate new service-fee revenue from value-added services.**

### **A Single Payments Hub for All Transactions**

With OmniPAY your payments operation will be able to accept a single mixed file of payments, streamlining your operations and simplifying the process for your corporate clients:

- Multi-currency
- High and low value
- Domestic and international
- Drafts

### **Consolidate and Streamline Your Payments Operations**

Consolidate your entire payments operations into a single payments hub, significantly reducing your operating expense.

- Process payments on behalf of multiple entities within a single global corporate structure keeping all accounting, regulatory, access, and database activities separate and distinct. Perfect for white label businesses.
- Automate many payment processing decisions with OmniPAY’s powerful rules engine. Flexible workflow routing can be based on a range of customer, account, and system parameters.
- Improve liquidity management with just-in-time payment delivery, coordinated customer and Nostr payments, and real-time treasury information.

### **Customized Services Deliver New Revenue Sources**

OmniPAY’s intelligent rules-based architecture makes it possible to offer VIP services to your best clients. Increase your fee-based income through special handling on a variety of criteria:

- Account specific
- Time-of-day
- Payment type
- Priority
- Currency
- Payment netting and bulking

### **Offer Entirely New Services**

OmniPAY’s versatility will allow you to develop entirely new services, giving you the competitive edge.

- Automated real-time reporting of settlement tracking information.
- Bulk pricing of FX transactions to leverage FX spreads.
- Real-time funds management on an account - by-account basis.
- Powerful query capability based on a range of payment criteria.
- White label services.
