

Thin Client for Third Parties

The PAYplus for CLS™ – Thin Client for Third Parties offers an intuitive graphical user interface (GUI) with rich functionality. It is optimized for quick response — even in situations where users have low bandwidth or network latency issues.

Rich Functionality

The Thin Client version enables users to perform all common tasks such as trade entry, payment processing and status monitoring.

Third Party users can track and process trades in: Pre-CLS, In-CLS, and Post-CLS workflow statuses; and can create freeform and repetitive trades and payments.

Designed to Speed Processing

The Thin Client for Third Parties includes many features that streamline analysis and trade executions while simplifying repetitive tasks.

- The inquiry search engine can be used to retrieve trades in the various workflow queues, and can create a variety of on-demand reports.
- User can manipulate, sort and search transaction details in a grid, and can export data directly into Microsoft Excel. Multi-sort and grouping options are now available.
- Framesets and I-frames allow reloading of only the relevant portion of a page, speeding up operational monitoring.

Open Technology Features

- Presentation elements are rendered in Dynamic HTML, using client-side JavaScript and XML Document Object Model.
- Communication between the web browser (IE 5.5 and above) and the web server is standard HTTPS.
- Use of industry standard web servers.
- For use with PAYplus for CLS versions 1.1.7 and above

Customize Thin Client with Your Branding

As with PAYplus for CLS, the Thin Client for Third Parties can be customized and white labeled by the Settlement Member provider to support branding and deliver a consistent customer experience.

Fundtech – The Leader in CLS Solutions

Fundtech is the leading provider of solutions for CLS Settlement Members and Third Parties. Clients benefit from our continued commitment to product enhancements that keep them ahead of market changes. As CLS adds support for new instruments and moves toward XML messaging, we are enhancing PAYplus for CLS to reflect these requirements, as well as adding further advanced features.
